JOB MARKET PAPER

Heads in the Sand: Theory and Experiment on the Interdependence of Information Avoidance [PDF](#) 

with Silvia Sonderegger and Fabio Tufano

We study whether deliberate information avoidance is interdependent across people. Building on Bénabou (2013), we develop a model predicting that information avoidance can exhibit strategic complementarities (contagious ignorance), substitutabilities, or be unconditional. We test these predictions in a novel experiment and find evidence consistent with contagious ignorance: individuals avoid information more when they expect others to do the same. Around 40% of subjects condition their choices on others' expected behavior, split evenly between strategic complements and substitutes.
